Subject: Malibu PCB raw data

Dear Jeff:

I hope your meetings in DC went well and I look forward to discussing them with you.

It has been over 2 weeks since I have asked for raw data test results that we know has been received by Environ. Instead of providing the raw data to our expert, Environ decided to send a report of their data analysis with no details and levels to all parents. This report is being used as propaganda to further the districts agenda rather than provide real science and results to the public, data that stand on its own merit.

I expect more from the EPA, I expect that when Jared promises transparency that his staff will force the school to share the data immediately. The EPA is in control of this process, we are under regulation... so please exert your power and tell Environ that they need to send all data. Please ensure me that you will get this data to me by the end of business Wednesday, July 16th. It has been 1 month since testing has begun... a plan that was not vetted by the public and is not inline with the EPA requirements set forth in Jan 27th, 2014 letter. This plan does not address all rooms pre-1979. This plan does not take into consideration the sources as an important part of the puzzle, nor does it include the many ingestion pathways. Without understanding the sources and doing an exposure assessment, the EPA and Environ cannot predict a safe environment for students and teachers. This assessment approach to PCBs is general practice in Region 1 and 2.

All of this aside, whatever testing is occurring, right or wrong, at MHS/JC, raw data should be immediately shared with our expert. Please have Environ immediately send this to jd18@me.com or kfehling@thefehlinggroup.com.

Anything else than sharing the raw data immediately constitutes a breach in the EPA's promise to make this process transparent and share data immediately.

I look forward to hearing from you on Wed, July 16th!

Respectfully,
Jennifer deNicola
Malibu Unites.
